

OBJECT ORIENTED PROGRAMMING (JAVA) LAB

CYCLE – 2

(Date: 05/01/2026)

Ex. No. 1.

Aim: Read a number from the console and find the factorial of the number by repeated multiplication. Display the result in the console.

Ex. No. 2.

Aim: Read a number from the console (let it be “n”) and display the first “n” Fibonacci numbers in the console.

Ex. No. 3.

Aim: Read a number from the console and check whether the given number is a prime number. Display the result in the console.

Ex. No. 4.

Aim: Read a number from the console and check whether the given number is a palindrome number. Display the result in the console.

Ex. No. 5.

Aim: Read a number from the console and find the sum of its digits. Display the result in the console.

Ex. No. 6.

Aim: Read a number from the console and reverse the given number. Display the reversed number in the console.

Ex. No. 7.

Aim: Read a number from the console and check whether the given year is a leap year. Display the result in the console.

Ex. No. 8.

Aim: Read three numbers from the console and find the largest among them using conditional statements. Display the result in the console.

Ex. No. 9.

Aim: Read “n” numbers into an array and find the sum and average of the array elements. Display the results in the console.

Ex. No. 10.

Aim: Read “n” numbers into an array and find the largest and smallest elements in the array. Display the results in the console.

Ex. No. 11.

Aim: Read “n” numbers into an array and sort them in ascending order using Bubble Sort. Display the sorted array in the console.

Ex. No. 12.

Aim: Read a string from the console and reverse the string. Display the reversed string in the console.

Ex. No. 13.

Aim: Read a string from the console and count the number of vowels and consonants present in it. Display the results in the console.

Ex. No. 14.

Aim: Read a number from the console and compute its factorial using a recursive method. Display the result in the console.
